Hans-Peter Blossfeld, Katrin Golsch, Gotz Rohwer : Event History Analysis With Stata before purchasing it in order to gage whether or not it would be worth my time, and all praised Event History Analysis With Stata:

0 of 2 people found the following review helpful. Great dealBy PbaiddThis book came exactly the way it was advertised. The book arrived just in time for the beginning of my semester.

Event History Analysis With Stata provides an introduction to event history modeling techniques using Stata (version 9), a widely used statistical program that provides tools for data analysis. The book emphasizes the usefulness of event

history models for causal analysis in the social sciences and the application of continuous-time models. The authors illustrate the entire research path required in the application of event-history analysis, from the initial problems of recording event-oriented data, to data organization, to applications using the software, to the interpretation of results. The book also demonstrates, through example, how to implement hypotheses tests and how to choose the right model. The strengths and limitations of various techniques are emphasized in each example, along with an introduction to the model, details on how to input data, and the related Stata commands. Each application is accompanied by a brief explanation of the underlying statistical concept. Readers are offered the unique opportunity to easily run and modify all of the books application examples on a computer, by visiting the authors Web site at <http://www.uni-bamberg.de/sowi/soziologie-i/eha/>. Examples include survival rates of patients in medical studies; unemployment periods in economic studies; and the time it takes a criminal to break the law after his release in a criminological study. This new book supplements Event History Analysis, by Blossfeld et al, and Techniques of Event History Modeling, by Blossfeld and Rohwer, extending on their coverage of practical applications and statistical theory. Intended for researchers in a variety of fields such as statistics, economics, psychology, sociology, and political science, Event History Analysis With Stata also serves as a text, in combination with the authors other two books, for courses on event history analysis.

About the Author Hans-Peter Blossfeld is a professor of sociology and director of the Institute for Family Research at Bamberg University. Former editor of the European Sociological Journal, he received his Ph.D. in economics from the University of Mannheim in 1984.
