Elias I. Traboulsi MD : Genetic Diseases of the Eye (Oxford Monographs on Medical Genetics) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Genetic Diseases of the Eye (Oxford Monographs on Medical Genetics):

0 of 0 people found the following review helpful. Complete source of information By Hector Genetic Diseases of the Eye, Second Edition (Oxford Monographs) is a complete source of information in the field of genetic diseases of the eye, a lot of pictures and clear information about the clinical and molecular aspects. Recommended! 0 of 0 people found the following review helpful. Great book! By Maria Angelica de F. D. de Lima Great text, easy to understand and the pictures are also helpful. I believe both geneticist and ophthalmologists may profit from reading this book. 0 of 0 people found the following review helpful. Five Stars By Rob Chun Great text

This highly anticipated new edition brings together an expert group of authors to provide a comprehensive, systematic resource on genetic diseases of the eye. This richly illustrated title covers areas such as: malformations; refractive errors, the cornea, glaucoma and cataracts; retina and the optic nerve; eye movement disorders, and systemic disease of the eye. The new edition remains grounded in a sound clinical approach to the patient with a genetic disease that affects the eye. Oxford Genetics is a comprehensive, cross-searchable collection of resources offering quick and easy access to Oxford University Press's prestigious genetics texts. Joining Oxford Medicine Online these resources offer students, specialists and clinical researchers the best quality content in an easy-to-access format. Online only benefits include downloading images and figures to PowerPoint and downloading chapters to PDF.

"With the rapidly evolving identification of both the genes and the mechanisms of genetic disorders of the brain and visual system, with the close approach of targeted genetic diagnostics, and, even more exciting, the appearance of gene replacement therapy for selected genetic eye disorders, we have waited patiently for the next generation of Genetic Diseases of the Eye. This liberally illustrated text covers both basic mechanisms and clinical spectrums with ample supplements of current references. As we move quickly toward whole exome sequencing for both disease phenotypes with multiple causal genes and the malformation syndromes with no apparent single causal gene, this text is an essential companion for every practitioner in genetics and ophthalmology!" --Richard Alan Lewis, M.D., M.S., Baylor College of Medicine "The new edition of Genetic Diseases of the Eye is an essential reference book for ophthalmologists and clinical geneticists who have an interest in inherited eye disorders. The book covers all the major genetic disorders of the eye, including developmental eye anomalies and those eye abnormalities that occur as part of multisystem disorders. Each of the chapters is written by leading experts in the field which ensures that each subject is covered in depth and the information is completely up to date. In addition there is sound practical advice about diagnosis and clinical management. It is an outstanding book that should take pride of place on the bookshelf of all clinicians working with patients with genetic eye disease." -Anthony Moore, Professor, University College of London Institute of Ophthalmology, Moorfields Eye Hospital "Dr. Traboulsi manages to flawlessly integrate the expanding knowledge of individual genes and their molecular functions with the evolving understanding of the clinical syndromes to which they are linked." -- oody's "This is an excellent book. It is very well illustrated with numerous colour>About the AuthorHead of the Department of Pediatric Ophthalmology and the Director of the Center for Genetic Eye Diseases at The Cleveland Clinic Cole Eye Institute. He is Professor of Ophthalmology at the Cleveland Clinic Lerner College of Medicine of Case University and Director of the Ophthalmology Residency Program at the Cleveland Clinic Foundation. He also serves as Vice-Chairman for Education at the Cole Eye Institute and Chairman of Graduate Medical Education at the Cleveland Clinic. He is Past President of The International Society for Genetic Eye Diseases and Retinoblastoma and its current executive vice-president. He has been the Editor-In-Chief of Ophthalmic Genetics since 1992. He has authored more than 300 scientific articles and book chapters.
