Anne Mitchell, Pinayur Rajagopal, Susan Holtz : Genetically Modified Crops: Promises, Perils, and the Need for Public Policy before purchasing it in order to gauge whether or not it would be worth my time, and all praised Genetically Modified Crops: Promises, Perils, and the Need for Public Policy:

Genetically Modified Crops: Promises, Perils, and the Need for Public Policy assesses the record of GM crops and the role of public policy in their regulation. It places biotechnology within an ethical context of concern for equity, the environment, and the common good. It presents a framework for understanding the varieties of biotechnologies and for gauging strategic action on public policy. This pamphlet will be helpful for understanding biotechnology issues and for guidance on engaging these issues at the level of public policy for the common good.
