From CRC Press : Handbook of Encapsulation and Controlled Release before purchasing it in order to gage whether or not it would be worth my time, and all praised Handbook of Encapsulation and Controlled Release:

The field of encapsulation, especially microencapsulation, is a rapidly growing area of research and product development. The Handbook of Encapsulation and Controlled Release covers the entire field, presenting the

fundamental processes involved and exploring how to use those processes for different applications in industry. Written at a level comprehensible to non-experts, it is a rich source of technical information and current practices in research and industry. This book is particularly designed for scientists and engineers working in various industries, including food, consumer products, pharmaceuticals, medicine, agriculture, nutraceuticals, dietary supplements, cosmetics, flavors, and fragrances. It offers a broad perspective on a variety of applications and processes, providing research information, figures, tables, illustrations, and references. The book also lays the groundwork for further advancements in encapsulation technology and controlled release applications. Catering to professionals, researchers, students, and general readers in academia, industry, and research institutions, the Handbook of Encapsulation and Controlled Release is a much-needed reference on the state of the field and an authoritative resource for continued research and development in encapsulation and controlled release technologies.

About the Author Munmaya Mishra, PhD, is a polymer scientist who has worked in the industry for more than 25 years. He has been engaged in research, management, technology innovations, and product development. He has contributed immensely to multiple aspects of polymer applications, including encapsulation and controlled release technologies. He has authored and coauthored hundreds of scientific articles, is the author or editor of seven books, and holds over 45 US patents, over 50 US patent-pending applications, and over 100 world patents. He has received numerous recognitions and awards. He is the editor-in-chief of three renowned polymer journals and the editor-in-chief of the recently published 11-volume Encyclopedia of Biomedical Polymers and Polymeric Biomaterials. He founded the International Society of Biomedical Polymers and Polymeric Biomaterials as well as a scientific meeting titled Advanced Polymers via Macromolecular Engineering, which has gained international recognition and is under the sponsorship of the International Union of Pure and Applied Chemistry.
