Great for a kid with a lot of intellectual curiosity By KwS2913 My 8 year old daughter, read this book on her own without asking questions and when she was done she had a clear understanding of genetics and DNA. I was very impressed with the way the material was presented. She was satisfied; I am thrilled. I am constantly on the look out for books that a second grader can understand, that introduce scientific concepts. So many of the books out there are just "grown-up" books that are poorly translated into more elementary language; the kid is confused and they don't learn anything. This book is NOT one of those! Definitely worth the money! If you are searching for a kids book on DNA look no further. Buy this book! 0 of 0 people found the following review helpful. The pictures are great. It was a little too complex for my ... By Sunnie Esper The pictures are great. It was a little too complex for my second grader to read on his own, but it worked well for my sixth grader. 1 of 1 people found the following review helpful. There are terrific images and loads of kid-friendly information in this book By sandra frazier There are terrific images and loads of kid-friendly information in this book. There are also a few areas that may not be suitable for little ones. Make sure to preview and mark these ahead of time.

Once upon a time you were very, very small. In fact, you were made of just one tiny cell. But the incredible thing about that tiny cell was that all the instructions to make you were hidden inside it. And all because of a very important

chemical substance called DeoxyriboNucleic Acid--everyone calls it DNA. Enjoy Your Cells is a series of children's books from the acclaimed creative partnership of scientist/author Fran Balkwill and illustrator Mic Rolph. Once again, they use their unique brand of simple but scientifically accurate commentary and exuberantly colorful graphics to take young readers on an entertaining exploration of the amazing, hidden world of cells, proteins, and DNA. It's over ten years since Fran and Mic invented a new way of getting science across to children. Think what extraordinary advances have been made in biology in that time and how often those discoveries made headlines. Stem cells, cloning, embryo transfer, emerging infections, vaccine development. Here in these books are the basic facts behind the public debates. With these books, children will learn to enjoy their cells and current affairs at the same time. And they're getting information that has been written and reviewed by working scientists, so it's completely correct and up-to-date. Readers aged 7 and up will appreciate the stories' lively language and with help, even younger children will enjoy and learn from the jokes and illustrations no expert required! Discover all the books in the ENJOY YOUR CELLS series, each available in coloring book and full-color formats!

About the Author Fran Balkwill is Professor of Cancer Biology at St. Bartholomew's Hospital and the London Queen Mary School of Medicine. Mic Rolph is a graphic designer with much television and publishing experience. Together, they have created many books for children, and have won several awards, including the prestigious COPUS Junior Science Book Prize.
