From Brand: Marcel Dekker Inc : Histochemistry in Pathologic Diagnosis (Chemical and Biochemical Analysis Series, Vol 22) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Histochemistry in Pathologic Diagnosis (Chemical and Biochemical Analysis Series, Vol 22):

0 of 0 people found the following review helpful. Histochemistry's BeginningsBy Katherine KayIn 1987 in the Foreward to this book, A. G. E. Pearse wrote: "More than 20 years ago, writing a foreword to the second edition of my own text on histochemistry, I wrote that the subject must stand or fall by its applicability At that time, though its use was becoming more frequent for experimental studies in anatomy and pathology, in other biological disciplines, such as cytology, zoology, and embryology little interest was aroused."Today, now 45 years later since Pearse's writing of that foreward this 1041-page tome of a book is still sought after. Published by a pillar in the community of health book publishers, Marcel Dekker, Inc. it deserves a prominent place among the many books that have since been published on histochemistry.For a complete and in-depth coverage of the topic, this is a good place to start. And perhaps the only and the earliest book covering the topic so fully.Other texts on the market may explain methodology of this field more. "The aim of this text is to provide access for the pathologist to histochemical information that will facilitate diagnosis..... Material is included pertinent to interests and needs of pathologists in either a private hospital or an academic situation, as well as residents in training," the editor states in the Preface.Thirty chapters follow from various doctors and researchers from the United States and around the world. Samuel S. Spicer writes chapter one,

edits the other 29 chapters and pulls the entire text together.
