**Juan Rosai : Histological Typing of Tumours of the Thymus** before purchasing it in order to gage whether or not it would be worth my time, and all praised Histological Typing of Tumours of the Thymus:

This classification represents a project aimed at bringing together the variety of ways thymic epithelial neoplasms have been classified. It focuses on their growth characteristics, and cytoarchitectural features . The classification, though restricted to the thymic region rather than the mediastinum in general, also covers neuroendocrine, germ cell, lymphoid, and stromal tumours, as well as tumour-like lesions and the neck tumours of thymic or related branchial

pouch derivation.
