**Elaine N. Marieb, Susan J. Mitchell : Human Anatomy Laboratory Manual with Cat Dissections (6th Edition)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Human Anatomy Laboratory Manual with Cat Dissections (6th Edition):

0 of 0 people found the following review helpful. Detailed, Organized, Easy to Learn FromBy AndyLoved the detailed pictures, the review questions, and the organization of the book itself. The lab manual uses most of the same diagrams and pictures as the Marieb textbook so it's easy to correlate between the two books if you're taking both the lecture and the lab portion of Human Anatomy.Most importantly the writing itself is top notch- there were rarely times when I was confused by any explanations. The text often refers to the diagrams, and the diagrams themselves are clearly labeled so

to optimize your learning experience. Great book.0 of 0 people found the following review helpful. Five StarsBy CustomerGreat book. Useful for my anatomy course. Great condition.0 of 0 people found the following review helpful. a very good practice bookBy pen freakthis book summarizes the important stuff from the text book. covers in enough detail on what you need to know. this is very helpful because it has practice review questions as well like the text book. it's spiral bound feature is also great!!! the front and back cover is soft though so I think i'm going to have to laminate it. overall great purchase. also if youre a student make sure to sign up for prime because it has great shipping benefits!

With 30 exercises covering all body systems; a clear, engaging writing style; and full color illustrations, this updated edition offers you everything needed for a successful lab experience. The lab manual also has an accompanying Instructors Guide.This latest edition features brand-new pre-lab quizzes at the beginning of each exercise. These new lab manuals also feature a brand-new art program that uses rich, vibrant colors, realistic 3-D rendering, and new histology and cadaver photos.

About the AuthorFor Elaine N. Marieb , taking the student's perspective into account has always been an integral part of her teaching style. Dr. Marieb began her teaching career at Springfield College, where she taught anatomy and physiology to physical education majors. She then joined the faculty of the Biological Science Division of Holyoke Community College after receiving her Ph.D. in zoology from the University of Massachusetts at Amherst. While teaching at Holyoke Community College, where many of her students were pursuing nursing degrees, she developed a desire to better understand the relationship between the scientific study of the human body and the clinical aspects of the nursing practice. To that end, while continuing to teach full time, Dr. Marieb pursued her nursing education, which culminated in a Master of Science degree with a clinical specialization in gerontology from the University of Massachusetts. It is this experience, along with stories from the fieldincluding those of former students, now in health careers that has informed the development of the unique perspective and accessibility for which her texts and laboratory manuals are known. In her ongoing commitment to students and her realization of the challenges they face, Dr. Marieb has given generously to provide opportunities for students to further their education. She contributes to the New Directions, New Careers Program at Holyoke Community College by providing several full-tuition scholarships each year for women returning to college after a hiatus or who are attending college for the first time and would otherwise be unable to continue with their studies without financial support. She funds the E. N. Marieb Science Research Awards at Mount Holyoke College, which promotes research by undergraduate science majors, and generously contributed to the University of Massachusetts at Amherst where she provided funding for reconstruction and instrumentation of a cutting-edge cytology research laboratory that bears her name. In 1994, Dr. Marieb received the Benefactor Award from the National Council for Resource Development, American Association of Community Colleges, which recognizes her ongoing sponsorship of student scholarships, faculty teaching awards, and other academic contributions to Holyoke Community College. In May 2000, the science building at Holyoke Community College was named in her honor. Additionally, while actively engaged as an author, Dr. Marieb serves as a consultant for the Benjamin Cummings Interactive Physiology CD-ROM series, and is an active member of the Human Anatomy and Physiology Society (HAPS), the American Association for the Advancement of Science (AAAS), and Sigma Xi. Susan J. Mitchell earned her Ph.D. in physiology from the University of Michigan. She studied the cellular basis of behavior before joining the faculty at Onondaga Community College where she is currently a professor in the Department of Biological Sciences. Her research in neurophysiology and training in physiology positioned her to write the original Nervous, Endocrine, and Digestive System modules in the Interactive Physiology 10-System Suite tutorial program. She has been honored with a NISOD Excellence Award for teaching, and been awarded several grants to develop technological resources for biology at OCC. Dr. Mitchell is a member of the American Physiological Society, National Association of Biology Teachers, National Science Teachers Association, and the Human Anatomy and Physiological Society (HAPS), where she is currently active on the Curriculum and Instruction Committee.
