**Moncef Zouali : Human B-Cell Superantigens (Molecular Biology Intelligent Unit)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Human B-Cell Superantigens (Molecular Biology Intelligent Unit):

Superantigens are a rapidly growing new class of ligands for human B-cells. The study of their interaction with lymphocytes provides insight into important mechanisms of the immune system. In this book, leading scientists survey the progress recently made in the identification, the nature, the structure of B-cell superantigens and their potential involvement in pathological conditions. It is the first book to bring together a comprehensive view of the recently described B-cell superantigens.
