From Wiley : Immunohistochemistry II before purchasing it in order to gage whether or not it would be worth my time, and all praised Immunohistochemistry II:

Leading international experts describe both novel and established immunohistochemical techniques and interpret results and validity regarding the various methods used, particularly in the investigation of the nervous system. Coverage includes the immunocytochemistry (ICC) of second messenger molecules, applications of confocal microscopy to ICC, the latest pre-embedding and dual labeling EM techniques, anterograde PHAL tracing and more.
