**Werner Luttmann, Kai Bratke, Michael Kupper, Daniel Myrtek : Immunology (The Experimenter Series)**  
before purchasing it in order to gage whether or not it would be worth my time, and all praised Immunology (The Experimenter Series):

Immunology is more than a laboratory manual; it is a strategic guide that provides the reader with tips and tricks for more successful lab experiments. The authors explore the current methodological variety of immunology in a simple manner, addressing the assets and drawbacks as well as critical points. Also provided are short and precise summaries of routine procedures as well as listings of the advantages and disadvantages of alternative methods. This well-written

guide is an essential companion for anyone using modern immunological methods in the laboratory. Shows how to avoid experimental dead ends and develop an instinct for the right experiment at the right time. Contains short and precise summaries of routine procedures (e.g. column chromatography, gel electrophoresis) as well as listings of advantages and disadvantages of alternative methods. Includes over 100 informative illustrations, background information, an extensive glossary, and a table of current CD nomenclature.
