Unfortunately, many couples are finding it impossible to conceive through traditional methods. The reasons as to why

are endless: they could be infertile, same-sex, or have certain medical conditions that make traditional conception simply not feasible. Luckily, medical science has an answer for these couples wanting a child of their own: In Vitro Fertilization. In vitro, literally meaning "in the glass," is done by combining the sperm and egg cell in a petri dish and then implanting it into the mother or surrogate mother. This way, couples who are unable to conceive will still have a biological connection to their child and will be able to nurture their baby from conception (as opposed to adoption). In vitro fertilization is fast becoming a popular medical procedure. However, before deciding whether this is for you, you must first understand the steps, costs, and possible risks that come with it. This guide is therefore designed to walk you through the details of this wonderfully advanced reproductive medical science which is helping to build families all over the globe.
