From S. Karger : Itch - Management in Clinical Practice (Current Problems in Dermatology, Vol. 50) before purchasing it in order to gauge whether or not it would be worth my time, and all praised Itch - Management in Clinical Practice (Current Problems in Dermatology, Vol. 50):

Albeit a very common symptom in dermatology, internal medicine, psychosomatics, neurology, and even oncology, itching was under-researched up until 15 years ago. Since then, the clinical aspects of acute and chronic itch have been examined extensively. As a result, some books on the topic have become available. Whereas most publications focus on experimental aspects and diagnostics, this volume of the series 'Current Problems in Dermatology' provides a

comprehensive overview regarding the management of chronic itch. Select authors consider interdisciplinary aspects as well as age, body region, and specific diseases as they present a great variety of available treatments. All physicians with patients suffering from itch especially dermatologists, general practitioners, gerontologists, nephrologists, hepatologists, neurologists, and palliative care doctors will find this publication to be an essential source of information.
