**Robert Amitrano, Gerard Tortora : Laboratory Exercises in Anatomy and Physiology with Cat Dissections**  
before purchasing it in order to gage whether or not it would be worth my time, and all praised Laboratory Exercises in Anatomy and Physiology with Cat Dissections:

0 of 0 people found the following review helpful. Not good conditionBy PixelI ordered a text book that included worksheets throughout each chapter. The book was listed in "GOOD" condition but when it arrived, the cover was a little worn, but looked ok. However when I looked through it, almost all of the worksheets throughout the book were already filled in, and lots of the pages were written on. Considering the amount of writing in this book, I would not have labeled it "GOOD" condition. For only about 30% more, I could have gotten a brand new, updated edition. Guess I have a different idea of what GOOD condition is. Shipping was fine. (BTW, many of the answers that were filled in

were't even right!)0 of 0 people found the following review helpful. Beware! Can't return this after 30 days  
By SJM  
Don't buy this unless you're sure you need it. Can't be returned after 30 days. And classes haven't even started yet!

By M. Engel  
This is a great lab manual for anatomy and physiology but it should make it more clear that its not just the cat dissection. I had already bought a lab manual and was looking to purchase a cat dissection manual and the description of this book doesnt make it clear that its not only the cat dissection but the entire lab manual as well. But if you are looking for a lab manual that also contains the cat dissection then this is great.

This traditional lab manual for the AP course examines every structure and function of the human body. In addition to a large variety of illustrations, the manual features dissection of the cat, numerous physiological experiments, an emphasis on the study of anatomy through histology, lists of appropriate terms accompanying art, numerous photomicrographs and specimen photos, phonetic pronunciation and derivation of terms, diagrams of lab equipment, lab report questions and report templates, and three appendices. An instructor's guide is available and provides detailed information for instructors about needed materials, suggestions, and answers to questions.

From the Publisher  
This top-selling laboratory manual follows a body systems approach and is compatible with any introductory anatomy and physiology text. The numerous, well-developed exercises require students to make microscopic examinations of cells and tissues, observe chemical reactions, perform dissections, record data, and then analyze the results of their work.  
From the Back Cover  
This top-selling laboratory manual features comprehensive coverage of all structures, extensive use of the scientific method, and full-color illustrations and photographs. Numerous laboratory exercises are expanded or enhanced. These include new physiology experiments, greatly expanded overviews in muscle tables, expanded tables and flow diagrams in artery and vein exercises, and completely rewritten exercises for surface anatomy. Provides thorough content coverage of both anatomy and physiology:  
dissection of the cat, white rat and selected mammalian organs, emphasis on the study of anatomy through histology, numerous physiological experiments, numerous SEMs and specimen photos, phonetic pronunciations and derivations for the vast majority of anatomical and physiological terms, diagrams of commonly used laboratory equipment, and laboratory report questions and blank reports submission. For anyone interested in anatomy and physiology.  
About the Author  
Robert Amitrano, the Biological Coordinator at Bergen Community College, teaches human anatomy and physiology, human biology, comparative anatomy and embryology. He is a colleague of Gerard Tortora's, and has worked on prior editions of that market leading Human Anatomy and Physiology text and continues to update and enhance the Lab Manual that supports Tortora's text. Robert Amitrano has also twice received awards from Who's Who Among America's Teachers.  
Gerard J. Tortora teaches at Bergen Community College. He is the well-known author of the best-selling and highly praised PRINCIPLES OF HUMAN ANATOMY, Tenth Edition published by John Wiley Sons.
