**David Seiden, Siobhan Corbett : Lachman's Case Studies in Anatomy** before purchasing it in order to gage whether or not it would be worth my time, and all praised Lachman's Case Studies in Anatomy:

Clinical insight into anatomy study By marge collier This book is a collection of highly readable case studies that offer specific anatomical and diagnostic references to help the student of medicine in relating the details of anatomy to patient scenarios that will be important and significant in future work.

The fifth edition of this popular collection of fifty-one anatomical case studies, now co-authored by an anatomist and general surgeon, covers all the major regions of the body: head and neck, thorax, abdomen, pelvis and perineum, and limbs. Each case study includes the patient's history, physical exam results, diagnosis, therapy, and a discussion of the findings from the anatomical viewpoint. The discussion becomes the heart of each case by skillfully evolving the logic required to make a diagnosis and prescribe therapy. The cases are ably designed to encourage critical thinking and problem solving. The clarity of Lachman's well-known writing style has been preserved throughout the book. Nineteen new cases including three covering "developmental embryology" have been added to the text and all other chapters have been updated to reflect the newest diagnostic procedures and current therapies. Twenty-five new radiographic figures, including MRI studies, have been added. This edition also offers review questions and answers at end of each section. Lachman's Case Studies in Anatomy, 5th edition succeeds in bridging the gap between theoretical anatomy and its application at the bedside, offering a superb demonstration of anatomical reasoning in clinical settings.

"This is an updated, modernized, and expanded new edition of a great classic published for the first time almost 50 years ago. It is well written and easy to follow without compromising its sound anatomical knowledge. Reading this book should strengthen medical students' motivation for learning anatomy and satisfy their interest in clinical medicine." --Doody's Book Service
