Jean-Luc Wertz, Olivier Bdu : Lignocellulosic Biorefineries before purchasing it in order to gage whether or not it would be worth my time, and all praised Lignocellulosic Biorefineries:

Written with a diverse audience in mind, this book describes the current status, development, and future prospects for the critical technology of second-generation biorefineries, specifically with a focus on lignocellulosic materials as feedstock. It provides an overview of the issues behind this technological transition, and it provides, in depth, the

science and technology related to cellulose for production of bioethanol and other biofuels. The book also highlights the main emerging routes that will serve as the source of important bio-generated products in the future.
