This pocket reference presents the most common diseases and disorders within the four main areas of nursing practice: medical-surgical, maternity, pediatric and psychiatric. Organized alphabetically and in outline format, the "Pocket Manual" highlights assessment, nursing intervention, and collaborative management. Streamlined for quick access and efficiency, readers will find only the most essential, "need-to-know" clinical information. Special features include community care considerations, pediatric alerts, gerontologic alerts, clinical alerts, and patient education.
