Arthur D. Alexander : Livingston Immunotherapy before purchasing it in order to gage whether or not it would be worth my time, and all praised Livingston Immunotherapy:

0 of 0 people found the following review helpful. Four StarsBy Juliet VictorBook was in good shape. No problems

Livingston Immunotherapy provides a 21st Century look at the modern practice of immunotherapy in the restoration and enhancement of the human immune system to effectively fight against the underlying causes of serious, life-threatening chronic diseases such as cancer, lupus and scierodermas, as well as less serious debilitating conditions

such as arthritis, chronic fatigue syndrome and fibromyalgia. Virginia Livingston, M.D., was a physician of great vision. Before conventional medicine recognized the possibility of environmental factors as a cause of cancer and other chronic diseases, she discovered the Progenitorcryptocides mycobacterium and its underlying connection with the growth of cancer cells. She understood the relationship of stress to the onset of chronic disease as well as the importance of the mind-body connection in the healing process. Her medical practice stressed the importance of a healthy, functional immune system in the fight against chronic, debilitating and often fatal disease. Today, thanks to her vision, thousands of patients at the Livingston Foundation Medical Center in San Diego, California have continued to reap the benefits of the life work of this remarkable physician. Livingston Immunotherapy is a "must" for the health conscious patient seeking a proven non-toxic alternative to conventional surgery, radiation and toxic chemotherapy.

About the Author The Author graduated from Case Institute of Technology and completed graduate work in Biochemistry at Cornell Medical College. Alexander has over 40 years experience in chemical and biological research. He served as Assistant to the Scientific Director of the Sloan-Kettering Institute (NYC) before becoming Associate Director of the Children's Cancer Research Foundation (Boston). Alexander later became Scientific Advisor in Immunotherapy to Virginia Livingston, M.D. (San Diego). Currently, he is a Director, Vice President and Scientific Director of the Livingston Foundation and Medical Center. He has lectured extensively and written many scientific papers. In 1998 he authored *The Curious Man*, the life and works of Hans A. Nieper, M.D. (Hannover, Germany), a brilliant clinician and leading proponent of alternative medicine.
