Winston Ho, Kamalesh Sirkar : Membrane Handbook before purchasing it in order to gauge whether or not it would be worth my time, and all praised Membrane Handbook:

3 of 3 people found the following review helpful. Best membrane reference book out there By Dr. Robert W. Callahan I've been in the Membrane business for over 20 years and seen both from an academic/research side to the industrial/business side. This book is a "must" for all membranologists. It is a screening test all new membrane ideas must pass. It is a must for all marketing/sales types who want to look at market potential. It is a must for all scientists who simply enjoy understanding things. 0 of 0 people found the following review helpful. Good book for a person entering membrane separation By A Customer Probably one of the best books in membrane technology. It provides a

complete repository of information on the various membrane separation technologies -- from gas, to liquid separations. It deals with basic theory in sufficient detail, and includes a fair coverage of the state of the art.

Membrane processes have wide industrial applications. This handbook reviews the published literature covering many existing and emerging membrane processes, and gives a state-of-the-art review of new membrane processes for environmental, water treatment, pharmaceutical, medical, food, dairy, beverage, paper, and textile concepts under development. It is intended to be a single source of underlying principles, membranes, membrane modules, process applications include: (1) dialysis for the purification of human blood (the artificial kidney), (2) sign, applications, and cost estimates. It is also electro dialysis for the desalination of brackish water, (3) reverse osmosis for the desalination of seawater, (4) There are several groups which may benefit ultrafiltration for the concentration of large proteins from this handbook. It can be used as educational material for industrial personnel engaged in membrane separations. For scientists and of pharmaceutical and medical products, beer, engineers active in research and development in wine, and soft drinks. Since membrane processes generally have low capital investment, as source of reference for the entire field.
