Basilio de Bragança Pereira, Carlos Alberto de Bragança Pereira : Model Choice in Nonnested Families (SpringerBriefs in Statistics) before purchasing it in order to gage whether or not it would be worth my time, and all praised Model Choice in Nonnested Families (SpringerBriefs in Statistics):

This book discusses the problem of model choice when the statistical models are separate, also called nonnested.

Chapter 1 provides an introduction, motivating examples and a general overview of the problem. Chapter 2 presents the classical or frequentist approach to the problem as well as several alternative procedures and their properties. Chapter 3 explores the Bayesian approach, the limitations of the classical Bayes factors and the proposed alternative Bayes factors to overcome these limitations. It also discusses a significance Bayesian procedure. Lastly, Chapter 4 examines the pure likelihood approach. Various real-data examples and computer simulations are provided throughout the text.

From the Back Cover This book discusses the problem of model choice when the statistical models are separate, also called nonnested. Chapter 1 provides an introduction, motivating examples and a general overview of the problem. Chapter 2 presents the classical or frequentist approach to the problem as well as several alternative procedures and their properties. Chapter 3 explores the Bayesian approach, the limitations of the classical Bayes factors and the proposed alternative Bayes factors to overcome these limitations. It also discusses a significance Bayesian procedure. Lastly, Chapter 4 examines the pure likelihood approach. Various real-data examples and computer simulations are provided throughout the text. About the Author Basilio de Braganca Pereira is a Professor of Biostatistics and of Applied Statistics at the Federal University of Rio de Janeiro in Brazil. Carlos Alberto de Braganca Pereira is a Professor of Statistics at the University of Sao Paulo in Brazil.
