Vandana Shiva : Monocultures of the Mind: Perspectives on Biodiversity and Biotechnology before purchasing it in order to gauge whether or not it would be worth my time, and all praised Monocultures of the Mind: Perspectives on Biodiversity and Biotechnology:

6 of 6 people found the following review helpful. BUY THE BOOK By Cinema AirI purchased the book after

watching some of her lectures/talks. She repeatedly makes reference to the "monoculture" attitude. This attitude is truly an important concept to improve your critical thinking and, therefore, decision making skills. This shift in perspective provides one with some of the foundations required for independent and intelligent thinking. This book should be purchased and read not simply for the content, but also for the methods of thought employed to explain the core ideas of the book. Those of you who find Charlie Munger interesting should find Vandana Shiva right up your alley due to her multi-perspective/disciplinary independent thinking. Also, it gives you glimpses of history that have either been forgotten or glossed over. This too will add to your ability to look at international events... or even simply teach you how to interpret news stories or articles. BUY IT. 0 of 0 people found the following review helpful. Monocultures of the mind By zorbathebutcher Excellent mind opening , thinking book, a nice book to meditate on. 0 of 0 people found the following review helpful. Five Stars By Matipv A must read in the subject

Vandana Shiva has established herself as a leading independent thinker and voice for the South in that critically important nexus where questions of development strategy, the environment and the position of women in society coincide. In this new volume, she brings together her thinking on the protection of biodiversity, the implications of biotechnology, and the consequences for agriculture of the global pre-eminence of Western-style scientific knowledge. In lucid and accessible fashion, she examines the current threats to the planet's biodiversity and the environmental and human consequences of its erosion and replacement by monocultural production. She shows how the new Biodiversity Convention has been gravely undermined by a mixture of diplomatic dilution during the process of negotiation and Northern hi-tech interests making money out of the new biotechnologies. She explains what these technologies involve and gives examples of their impact in practice. She questions their claims to improving natural species for the good of all and highlights the ethical and environmental problems posed. Underlying her arguments is the view that the North's particular approach to scientific understanding has led to a system of monoculture in agriculture - a model that is not being foisted on the South, displacing its societies' ecologically sounder, indigenous and age-old experiences of truly sustainable food cultivation, forest management and animal husbandry. This rapidly accelerating process of technology and system transfer is impoverishing huge numbers of people, disrupting the social systems that provide them with security and dignity, and will ultimately result in a sterile planet in both North and South. In a policy intervention of potentially great significance, she calls instead for a halt, at international as well as local level, to the aid and market incentives to both large-scale destruction of habitats where biodiversity thrives and the introduction of centralised, homogenous systems of cultivation.

'One of the world's most prominent radical scientists' The Guardian 'Shiva has devoted her life to fighting for the rights of ordinary people in India. Her fierce intellect and her disarmingly friendly, accessible manner have made her a valuable advocate for people all over the developing world.' Ms Magazine 'The South's best known environmentalist.' New Internationalist 'Shiva is a burst of creative energy, an intellectual power.' The Progressive About the Author Vandana Shiva was one of India's leading physicists and is now a leading environmental campaigner, the winner of the Alternative Nobel Peace Prize and the author of several books, including *Soil not Oil* (2008), *Earth Democracy* (2005) and *Stolen Harvest* (2001).
